Mary Parker Follett’s Leadership Theory and a Practical GPU Primer

By Recommended Reading from Tech Founders • May 11, 2026

Today’s strongest organic recommendations split between management theory and technical fundamentals. Eric Ries made the clearest case for reading Mary Parker Follett, while Andrew Chen shared a practical video overview of GPU internals.

Most compelling recommendation

Mary Parker Follett’s management writings

- **Content type:** Management writings / theory [1]
- **Author/creator:** Mary Parker Follett [1]
- **Link/URL:** Not provided
- **Who recommended it:** Eric Ries [1]
- **Key takeaway:** Ries highlighted Follett’s ideas of “power with not power over,” leaders creating more leaders, and the “invisible leader”—a shared common purpose that guides decisions when no manager is present [1]
- **Why it matters:** He framed her work as unusually ahead of its time and useful for understanding how organizations are shaped by thousands of small decisions made away from direct managerial oversight [1]

This stood out because the recommendation came with a full argument for why to read it: Ries connected Follett’s ideas directly to day-to-day organizational tradeoffs, then said her work will enlighten readers [1].

“We need to focus on power with not power over.” [1]

Another useful save

How do Graphics Cards Work? Exploring GPU Architecture

- **Content type:** Video [2]
- **Author/creator:** Not specified
- **Link/URL:** <https://youtu.be/h9Z4oGN89MU?si=2WU9AAeQnhL7B1yP> [2]
- **Who recommended it:** Andrew Chen [2]
- **Key takeaway:** Chen called it a “nice overview of GPU internals” [2]
- **Why it matters:** The value is its framing as an overview, making it a straightforward starting point for readers who want a clearer grounding in GPU architecture [2]
